

a.) Amendments to Specification.

*Replace the abstract in the specification as originally filed, with the following rewritten paragraph:*

A device for adjusting the light beam in a microscope. The device couples the light beam into a housing of the device. A first and a second detectors are positioned at different distances to the coupling point. In the line of coupled in light beam at least one beam splitter is provided, which directs the coupled-in light beam onto at least one of the photo detectors.
